

**2019  
WINTER SPORT  
WORKBOOK**

***DAINESE***

From the very beginning Dainese has worked with skiers at the centre of a constellation of perfectly complemented research and development strategies. Collaboration with world-class technical laboratories optimize perfectly the vision of their skiers.

Dainese's passion and commitment to safety is thus as strong as its desire for the podium. The logo says it all. The Speed Demon moves last in a definite direction, seeing things that mortals can't imagine.

Just as the armadillo's shell and the lobster's exoskeleton are the result of aeons of adaptive evolutions, so Dainese protective products are the result of a constantly adapting, evolving energy that seek the perfect protective solution.

Dainese protective gear is made for all conditions and all situations, giving you the confidence to push boundaries, and step right to the edge of what's possible.

Style, aesthetic, form and function are conceived as an integral whole that chimes perfectly with the times ensuring product development and exactitude in manufacturing are equally important elements of the products' identity.

## BIOSUIT

### WHAT IS THE BIOSUIT?

Starting from Arthur Iherall's studies in the Fourties, it has been discovered that there are certain points of the body that, despite movements, do not contract and do not stretch. By connecting these points through the so-called "lines of non-extension", pressure remains constant. BioSuit is designed to connect these points, being able to apply the necessary mechanic pressure to the body, although without compromising movement. The news is exactly the replacement of pneumatic pressurization with mechanic one. The inside of astronaut's suits, in fact, in order for humans to survive in the vacuum of space, need to provide pressure. The skintight suit allows for a degree of movement impossible in a gas-filled suit.

### WHEN DID THE BIOSUIT GO TO SPACE?

BioSuit has not gone to space yet. BioSuit was born from one of NASA's needs who, for the first human journey to the Red Planet expected around 2030, has set up a project to design a new space suit, lighter and more practical.

### HOW WAS THE BIOSUIT MADE?

The lines of non-extension are represented by the red and black filaments that decorate the BioSuit prototype. The suit will be made of elastic material, but for all other features options remain open. For sure, BioSuit must guarantee to astronauts oxygen inflow, protect them from effects of prolonged microgravity, solar radiation and impacts with micro-meteoroids, although offering greater flexibility and finding the perfect balance with ergonomics and comfort.

### HOW DID THIS PROJECT COME ABOUT?

Conceived by Dava Newman, MIT Professor and NASA'S Deputy Administrator, BioSuir has been designed by Trotti and Associates, owned by Argentinian space architect Guillermo Trotti, whereas the first prototypes are the outcome of the Dainese Science and Research Center's know-how.

## SEA-GUARD

The Dainese Group is the "Official Safety Partner" of the 2017 America's Cup Winner **Emirates Team New Zealand**. The crew, who for the first time chose pedals instead of traditional "coffee grinders" to operate the winches, wore the new SEA-GUARD jacket designed and developed by Dainese, which integrates protection and aerodynamic performance with its floating functions.

At over 50 knots, the conditions facing the crew are extreme, similar to those to which MotoGP riders are exposed. On-board safety is therefore the key element behind the partnership between Dainese and Emirates Team New Zealand. This has led to the creation of SEA-GUARD, the first item of protective clothing specially designed for competitive sailing. Thanks to a wise balance between Crash Absorb material and low-density PE, SEA-GUARD, in addition to its floating function, provides impact protection and also allows complete freedom of movement for next-generation grinders, who use their leg power to push pedals instead of arm-powered winch grinding.

SEA-GUARD is the only ergonomic and comfortable solution designed to optimise crew performance. SEA-GUARD incorporates an aerodynamic motorcycle hump, together with the Oxygen tank housing - something that the sailors must use in emergencies such as when the boat capsizes - and for on-board communication devices.

AWA MID 1.1 LADY

| PART NUMBER | SIZES    |
|-------------|----------|
| 204890968   | XS - XXL |

The unique composition of the AWA MID 1.1 LADY gives this garment a graceful look while maintaining a high level of performance. The hybrid structure of the mid layer is characterized by the upper part in Polartec High Loft, which offers a casual look suitable for everyday situations combined with great thermal isolation and transpiration. The garment is made even more valuable with a seamless layer in the lower portion crafted from Merino wool, which is famous for its natural traits of effective transpiration and adaptation to body temperature.

LAYERING SYSTEM

1

## GORE-TEX®

The original GORE-TEX products range with the GUARANTEED TO KEEP YOU DRY™ promise is made to do exactly that—providing best-in-class waterproof protection you can rely on. Whether you're dashing through downtown showers or facing down mountain storms, you get innovative waterproofness, windproofness, and excellent breathability.

2

## PRIMALOFT® CROSS CORE™

PrimaLoft has established itself as the world leader in providing comfort solutions with high-performance insulation, fabrics and yarns through an unwavering commitment to pushing the boundaries of material science. We are constantly striving to create innovative new technologies that unlock your potential to connect with the outdoors. The PrimaLoft® Cross Core™ series represents a significant advancement in our technological capabilities. The PrimaLoft® Cross Core™ series fuses multiple PrimaLoft® technologies to create next-level comfort and performance.

3

## POLARTEC® ALPHA®

Polartec® Alpha® is a new active insulation fabric technology that regulates core body temperatures during dynamic and static activities. This advanced thermal material offers more design versatility than traditional puffy styles by providing enhanced fiber stability in a compressible high loft construction. Alpha® can be paired with more openconstruction woven fabrics to create complete air permeable packages that are truly customizable on both the face and back of the fabric.

| 204749487   | XS - XXL | Designed for those who consider skiing more than just a sport and wake up early -head up to the slopes- ready to leave their lines on the hard pack. AWA TECH Race Carve points out its focus on maximum performance and technology evolution. The engineered layering system makes the garment incredibly cross-functional and adaptable to every climate condition. The inner jacket, made with premium technical fabrics, thanks to the front part in Primaloft Cross Core provides great insulation, while the side part, with seamless construction, provides extreme freedom of movement. The outer Gore-Tex® membrane, thanks to its complex structure, allows the skier to brake records even when the weather conditions are treacherous. |

## HP1

### HARD PACK 1

The building block of every ski resort, the reliable canvas that breeds progression and is home to the fastest racers and is hardpack. Every lift-served experience revolves around and is tied together by hardpack snow and this is the essence of Dainese's HP collection. HP is Dainese's inbound, resort-specific part of the 2018 winter collection.

HP1 is race-inspired resort outerwear for skiers who demand top performance from themselves and their gear.

Skiers who live for speed, testing the limits of their edge grip and control, carving the steepest pitches.

*Know no limits*

# HP1 M1

KNOW NO LIMITS

The second generation of HP1 M1 is a mix of unique technology and quality, specifically conceived for most demanding skiers, who look for the steepest pitches to carve. This is not a ski jacket, this is The ski jacket. It combines the high breathability and waterproofness provided by the **Dermizax EV membrane (1)**, with the extreme protection and comfort of one of the most iconic Dainese product, the **Flexagon Back protector (2)**.

The jacket is finished with the great insulation ensured by **Primaloft (3)**, the **pre-curved sleeves construction (4)**, and an athletic fit and a short cut, the perfect ski weapon. What's more, the back protector is provided separately, in order to allow the skier to choose between skiing with or without the protection. Just make the choice between fully light or fully safe, then the fun begins!

HP1 M1

AWA BL M SHIRT

| PART NUMBER | SIZES         |
|-------------|---------------|
| 204910023   | XS/S - XL/XXL |

Technology and traditions bounded together into this cross-functional base layer designed for active-minded people, to suit multiple outdoor activities and adapt to different intensity level. The AWA base layer is engineered combining great insulation and soft touch feel provided by the natural Merino Wool with the maximum breathability ensured by the use of seamless construction with specific patterns not only aesthetical but functional that ensure the most sweating areas to leave the moisture outside.

| FEATURES                                                                        | MATERIALS       |
|---------------------------------------------------------------------------------|-----------------|
| Bacteriostatic, hypoallergenic and anti-odor                                    | 50% Polyamide   |
| Differentiated weaving with interwoven micro mesh sections for improved airflow | 30% Dryarn®     |
| Micromesh sections for improved airflow                                         | 20% Merino wool |

HP1 BL M SHIRT

| PART NUMBER | SIZES         |
|-------------|---------------|
| 204910019   | XS/S - XL/XXL |

The HP1 BL is the Dainese First Layer specifically designed for those who wants to push past their limits and conceived to satisfy the needs of most demanding skiers. Years of research into the dynamics of the human body have helped determine which parts of the body are never extended or contracted, despite movement. By joining these points along "non-extension lines", the pressure placed on the body is kept constant. This research helped Dainese engineer the BIOSUIT, designed for NASA astronauts, and was the inspiration behind the structure of the HP1 BL M SHIRT/HP1 BL L SHIRT. Seamless technology and the Dryarn fabric are combined together to provide great insulation with maximum breathability, coolness and comfort. Meanwhile, the "non-extension lines" guarantee a compression effect that helps keep muscles in position when skiing.

| FEATURES                                                                                             | Seamless build for superior comfort |
|------------------------------------------------------------------------------------------------------|-------------------------------------|
| Bacteriostatic, hypoallergenic and anti-odor                                                         | MATERIALS                           |
| Differentiated weaving with compression areas and interwoven micromesh sections for improved airflow | 10% Dryarn®                         |
| Mapped body "lines of non-extension"                                                                 | 85% Polyamide                       |
| Micromesh sections for improved airflow                                                              | 5% Elastane                         |

D-air® Ski is the ultimate expression of safety and innovation for competitive skiing in downhill and Super-G disciplines. Its intelligent algorithm analyzes and combines the data received from the sensors (a gyroscope, a triaxial accelerometer and a GPS) and determines the activation of the patented airbag - characterized by special micro-filaments - that covers the upper part of the body, integrating with Wave rigid back protector. The result is an highly innovative and ergonomic safety system, aerodynamically neutral, that can detect independently an hazardous situation and inflate immediately to protect the skier. Sofia Goggia, Matthias Mayer and Lindsay Vonn, among the best champions, choose D-air® Ski with a common goal in mind: to win.

|------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 204879992 - MAN  | XS - XXL | Flexagon, the gold standard for soft protection in the winter sport market, is combined with the functionality derived from the outdoor world for a new hybrid product. The new Flexagon Polartec Vest unites the utmost in protection, provided by the hexagonal structure, with the breathability and thermal capacity of the Polartec fabric used to create the vest. The result is a garment that goes unnoticed and can be used against the skin with the same functionality as a base layer, while maintaining the highest European protection standards thanks to its structure. |
| 204879993 - LADY | XS - XXL |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

RHYOLITE 2 WINTER

| PART NUMBER | SIZES   |
|-------------|---------|
| 204879997   | S - XXL |

The result from extensive research into the movement of the human body, the Rhyolite 2 Safety Jacket is Dainese's most ergonomic and advanced design to date and the pinnacle of upper body armor available today. Advancing Dainese's use of functional patterns inspired by nature, this jacket features Flexagon protection coverage from the back to the chest, resulting in superior breathability, comfort and protection. With removable sleeves utilizing Dainese's Pro Armor elbow and shoulder pads, the Rhyolite 2 is an adaptable to address each skier's needs.

# ZEISS SONAR

FOR A BETTER READING OF THE SLOPES

More safety and visual comfort: our ZEISS SONAR lens technology improves your vision in snow-covered terrain in all light conditions. Uncoated, it is suitable for low light conditions, while a mirror coating is recommended for strong light. Colours and contrasts are enhanced – even when you're racing down the mountain. The special spectral curve of the tint acts as a blue attenuator, but still allows a portion of the blue light through, in order to receive all important information from light and from your environment. SONAR allows you to better read the slopes because uneven areas in the snow (bumps and dips) are easier to recognise.

ZEISS SONAR\* is an innovative tint from ZEISS Sunlens in Italy. It improves vision in all light conditions in the snow and enhances colours, brightness and contrast, even at high speed on the slopes. In other words, it makes skiing safer.

Unlike standard blue filters, the special spectral curve of ZEISS Sonar suppresses blue light but allows some to reach the eye – in the range between 380 and 500 nm. This allows you to recognize unevenness in the snow such as bumps and depressions. This makes skiing and snowboarding safer.

Furthermore, the snow goggles are available with ZEISS Sonar, and the models for men are available with polarizing filters. ZEISS POL snow goggles feature thermally shaped lenses with a red tint.

They ensure:  
Less glare caused by snow and ice  
Optimum vision and wearing comfort  
Better contrast and detailed vision  
Protection against sunlight

# RIBBO HP

CONCEIVED TO ADAPT

**RIBBO** garments are made to accompany youths in their growth, adapting the fit with a simple move”

**-SHOULDERS:** just open the little pocket placed on both shoulders, pull the light blue tape out, and simply tigh it to adjust the sleeves lenght up to 10 cm less.

**-WAIST:** pull the elastic band and lock it on the buttons, in order to adjust the pants fit.

**-LEGS:** just open the little pocket placed on both calfs under the snow gaiters, pull the light blue tape out, and simply tigh it to adjust the legs lenght up to 10 cm less.

SCARABEO FLEXAGON WAISTCOAT

| PART NUMBER | SIZES    |
|-------------|----------|
| 204876005   | JS - JXL |

Flexagon redefines the standard of protective comfort with its innovative construction technology. The new version was restyled with a brand new fabric, capable to provide the skier with an unnoticed comfort to the touch and breathe better then the previous fabric. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30°, 90° and 150° axes) along with effective protection.

| 201980064   | N     |

GENERAL FEATURES

- Capacity: 123 L
- Heavy duty oversized wheels with extra clearance
- iFOM (integrated foam) construction throughout for added gear protection
- Large main compartment with adjustable dividers and padded helmet chamber
- Secure hold compression strap system
- Several multi-use LID compartments for apparel and smaller gear
- SLED (Structural Load Equalizing Deck)
- System for increased durability and handling in the harshest of conditions
- Telescoping pull handle
- Wide mouth LID opening for easy access to all gear compartments

D-CABIN WHEELED BAG

| PART NUMBER | SIZES |
|-------------|-------|
| 201980071   | N     |

The D-Cabin is carefully designed to comply with airline cabin regulations, with over-head-compartment-friendly dimensions and a light construction to help meet weight restrictions. The polyethylene main tub is sturdy enough to withstand abuse, and there's a single-stage telescoping handle.

GENERAL FEATURES

- Capacity 38 L / 49 L
- Dimensions: 54 cm x 35 cm x 20 cm
- Easy clean eco-friendly PVC divider
- Expandable: allows you to increase the packing space
- Front accessory pockets
- Large main volume with adjustable divider gives multiple packing options
- Lightweight for greater carrying capacity on weight rescttricted airlines
- Molded PE Tub whitstands abuse and keeps gear safe from the elements
- Single stage telescopic trolley handle
- We recomend checking with your airlines for the latest cabine luggage allowance
- Weight: 2,8 kg

| 201980070   | N     |

A dependable riding backpack for everyday use, the D-Throttle features a plethora of pockets for small items and electronics, and the design allows external access to the hanging, padded laptop sleeve. The fabric has undergone a water-resistant treatment.

GENERAL FEATURES

- 1 fleece lined electronics pocket
- 1 large front pocket
- 2 external side pockets for beverage / small items
- 2 internal organization pockets
- Capacity: 27,9 L
- Dimensions: 29.2 cm x 17.8 cm x 51 cm
- External access hanging padded computer
- Sleeve with water resistant rain hood
- ERGONOMICS
- 2 way adjustable sternum strap

## DERMIZAX™ EV

Dermizax™ EV is a waterproof, windproof, and wicking membrane that utilizes moving molecules, as opposed to most other membranes which have micropores. This offers a number of advantages and makes Dermizax™ shell clothing the very best on the market thanks to its high performance and superior durability. The Dermizax™ membrane is extremely flexible. It has an elasticity of more than 200%. In practice, this means that the membrane can be stretched up to twice its own length in four directions. This ensures that Dermizax™ garments are very comfortable to move in, while reducing the risk of delamination during extreme activities.

## DERMIZAX™ DX

Dermizax® DX is a 2 way stretchable membrane that, thanks to its ultrathin non porous membrane is capable of providing the user with superb waterproofness and though performance that withstands all-round outdoor conditions

## GORE-TEX®

The original GORE-TEX products range with the GUARANTEED TO KEEP YOU DRY™ promise is made to do exactly that—providing best-in-class waterproof protection you can rely on. Whether you're dashing through downtown showers or facing down mountain storms, you get innovative waterproofness, windproofness, and excellent breathability.

## D-DRY® PLUS

D-Dry® Plus is a proprietary microporous laminated structure that creates a waterproof and breathable fabric. Micropores are thousands of times smaller than a drop of water, but larger than water vapor, so they exclude water allowing moist vapor on the inside to move outward. D-Dry® Plus is devised of a unique, new three layer construction. This includes an ultra lightweight scrim fabric that is laminated on the back of the waterproof/breathable layer, sandwiching between the scrim, the membrane and the face fabric. This new overall construction is lighter, more packable and more durable. D-Dry® Plus effectively balances protection from rain and snow on the outside (30,000 mm water column) with the ability to let warm perspiration escape outward during high-output activities (30,000 g/m2/24hrs).

## TRAILKNIT

TRAILKNIT is a fabric construction developed by electronic knitting machines linking loops of yarns on needles. This knitted construction differs from a traditional woven fabric as it is more flexible and can be more effortlessly constructed. TRAILKNIT has been developed for garments that are elastic and better respond to the skier's motion. A garment featuring a knitted construction is more form fitting, since its elasticity allows it to contour the body more closely. Knitted constructions also enable extra curvature to be introduced without seams – akin to the heel of a sock. Knitting allows an extremely complex fabric construction: The yarn in TRAILKNIT fabric follows a meandering path that can change seamlessly forming different stitching patterns that design precise functional zoning with engineered performance in key areas.

## PERTEX® QUANTUM

Pertex® Quantum uses a tightly woven structure to provide a light and soft fabric that allows insulation to fully loft. Precisely constructed from incredibly fine yarns, Pertex® Quantum fabrics are designed to trap still air and improve the efficiency of insulation. A durable water repellent (DWR) finish sheds light rain and snow to provide additional weather protection. Garments made with Pertex Quantum gain great lightweight and packability, soft touch feel and windproofness to retain warmth.

## BABY CAMEL WOOL

Camels shed their hair naturally every year and the fibre is shorn, gathered or combed. The inner coat is passed through a de-hairing machine, in the same way as cashmere, a slow and expensive process. Baby camel fibre is softer and lighter in colour than that of an adult, and it is more expensive. Baby camel varies from white to fawn, while the adults tend to be darker brown. Baby camel is a great alternative to cashmere: it has a similar micron count but it is much more affordable. Camel fibre is also easier to dye with natural dyes as it is less likely to felt than cashmere. Camel down looks like a fluffy cloud and it is easy to spin long drawn, even without any hand carding. Camel tops are combed like wool tops and you can spin it anyway you like.

## MERINO WOOL

Unlike regular sheep who chew grass in the lowlands, the merino is built to survive the scorching summers and freezing winters of New Zealand's rugged Southern Alps range. The merino can survive these extremes because of the incredible natural engineering of their fleece. Super lightweight and breathable, the merino's summer coat keeps cool in temperatures of up to +35°C. In winter, the merino grows an extra layer of wool over their base coat to protect them against temperatures that plummet to -20°C. Simple, efficient, ingenious. Nature's solutions aren't tested in laboratories; they face the ultimate field test.

## MERINOS DOWN

It's a mixture of finest Merino wool with first class down. Wool component it's ozone treated for best washability performance, free from harmful substances. Why using MERINO WOOL? Merino wool is common in high-end, performance athletic wear. Typically meant for use in running, hiking, skiing, mountain climbing, cycling, and in other types of outdoor aerobic exercise, these clothes command a premium over synthetic fabrics. Several properties contribute to merino's popularity for exercise clothing, compared to wool in general.

## GOOSE DOWN

Goose down is the layer of underplumage that geese have beneath their feathers to keep them warm and dry. A down cluster is soft and fluffy and has filaments growing in all directions. Unlike feathers, down does not have quills. Goose down is traditionally used to fill pillows, duvets and other types of bedding. Goose down clusters are superior as they have larger and so possess more fill power and therefore have better insulating properties than down from any other bird. Goose down is luxuriously soft, resilient and has excellent insulating properties. It varies in colour from white to dark gray. It is also extremely breathable. Water vapour can pass through the down whilst the air pockets retain their warmth. These properties make goose down an excellent choice of filling for duvets and other bedding.

## PRIMALOFT® CROSS-CORE™ INSULATION

PrimaLoft has established itself as the world leader in providing comfort solutions with high-performance insulation, fabrics and yarns through an unwavering commitment to pushing the boundaries of material science. We are constantly striving to create innovative new technologies that unlock your potential to connect with the outdoors. The PrimaLoft® Cross Core™ series represents a significant advancement in our technological capabilities. The PrimaLoft® Cross Core™ series fuses multiple PrimaLoft® technologies to create next-level comfort and performance.

## PRIMALOFT® SILVER INSULATION BOOST

A hybrid of PrimaLoft® Silver Insulation Down Blend and PrimaLoft® Silver Insulation, PrimaLoft® Silver Insulation Boost is a fusion of 80% PrimaLoft® ultra-fine fibers and 20% water-repellent down engineered to deliver incredible lightweight warmth and wet weather performance in a luxuriously soft and remarkably slim silhouette. Unmatched warmth-to-thickness thermals mean more warmth in a smaller package for greater agility and freedom of movement while a PrimaLoft® proprietary treatment ensures protective performance in variable conditions. For streamlined performance this solution blends the wet-weather protection of PrimaLoft® synthetic insulation with the enhancement of down.

## MICROROLLO

The Microrollo is a mix of loose fiber of 50% polyester and 50% wool. This type of construction features the possibility to be injected directly inside the garments providing them with the same great softness and filling power of the down. The Merino used comes directly from Argentinian Merinos Sheep, and the construction is made with the following materials:

- Poly Fiberballs: used to lighten the compressive weight of the padding
- Argentinian Merinos Wool: the acclaimed Merinos Wool is well known for its excellent softness properties, gloss and breathability, in particular

## D-THERMO INSULATION

Dainese's synthetic microfiber thermal insulation material. It offers good standard in terms of warmth to weight ratio and a relatively good compressibility.

## POLARTEC® POWER WOOL™

Polartec® Power Wool™ is a design breakthrough for combining the distinct advantages of natural and synthetic fibers in a bi-component fabric. The industry standard of blending different yarns into a mixed composition reduces the intended benefits and hampers overall fabric performance. By isolating a merino wool interior and a synthetic fiber exterior we developed a hybrid fabric with distinct surface features to optimize wicking, breathability, odor resistance and durability. Wool fibers offer increased base comfort by retaining insulation and breathability even when wet. Their absorbent nature pulls moisture vapor away from your skin, transferring it to the outer synthetic layer where it expands and evaporates more quickly. This mechanical wicking action allows Polartec® Power Wool™ to keep moisture in motion at all times.

## POLARTEC® POWER SHIELD®

Polartec® Power Shield® was developed to bring greater strength and versatility to the soft shell fabric category. By designing a dense knit multi-component fabric we created a stronger balance between warmth, weather resistance and breathability. This adaptable protection set a new industry standard for performance fabrics that could remain comfortable and excel in calm to inclement weather conditions. By integrating an advanced micro-porous membrane between a durable weather repelling exterior we created a resilient outerwear fabric with increased breathability. The ability to block wind and water was finally directly integrated with a surface technology that could consistently increase breathability during any activity.

## POLARTEC® ALPHA®

Polartec® Alpha® is a new active insulation fabric technology that regulates core body temperatures during dynamic and static activities. This advanced thermal material offers more design versatility than traditional puffy styles by providing enhanced fiber stability in a compressible high loft construction. Alpha® can be paired with more open-construction woven fabrics to create complete air permeable packages that are truly customizable on both the face and back of the fabric.

## POLARTEC® HIGH LOFT™

Polartec® High Loft™ was created to expand and enhance the performance benefits and design applications of fleece technologies. By utilizing a high loft fiber construction we developed a stunningly soft and fluffy structure that compresses to pack easily in small spaces. Large air pockets created by the extended fibers retain optimal warmth to provide the highest warmth to weight ratio of any thermal fleece fabric available today. The lofted fibers create large air pockets for retaining optimal body warmth and releasing excess heat for enhanced breathability during activities. This fluffy structure also reduces surface friction for comfortable layering with other materials.

## POLARTEC® THERMAL PRO®

Polartec® Thermal Pro® fabrics are the most visually dynamic and technically advanced of the Polartec® insulation fabrics. Available in a variety of unique surface textures and patterns, many of which enhance performance, Polartec® Thermal Pro® fabrics are great styling options for virtually every end use. New high loft versions have achieved the highest warmth to weight ratios of any fabric Polartec® has ever offered. Other versions have the look of traditional wool with all the performance benefits of fleece. Polartec® Thermal Pro® is our most diverse family of fabrics.

## POLARTEC® POWER DRY®

Polartec® Power Dry® fabrics are designed to keep your skin dry when you sweat. All fabrics in this series feature a patented bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly.

## FLEXAGON BACK PROTECTOR

Flexagon redefines the standards of protective comfort with its innovative construction technology. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory retention foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30° 90° and 150° axes) along with effective protection.

## PRO ARMOR

PRO ARMOR sets the benchmark for breathability, ergonomics and protection featuring a functional pattern inspired by the fractals principle, the nature's language used to create complex structures that now becomes the new Dainese's protective design code. With the ultimate blend of mobility and protection, the low-profile design delivers unrestricted movement and all-day comfort while still meeting the EN 1621.1 European standards for impact protectors.

## BAP BACK PROTECTOR

With a shape and armour system inspired by crustaceans and the armadillo, the BAP featured a composite structure, comprising an anatomically-shaped soft base and a series of articulated plates, each sized to provide the best distribution of impact forces and incorporating a low-memory, shock-absorbing polyurethane foam insert.

## POLYPROPYLENE HARD-SHELL

Synthetic polymer used to produce the hard shell plates in protectors. Distinguished by elevated resistance to abrasion and impact. With their special construction, composite plates on the shoulders, elbows and knees comply to EN 1621.1/97 Standard. The rigid external shell absorbs and distributes impact energy over the protector's entire surface thanks to a patented reticulate structure that also offers lower thickness and weight.

## SOFT FLEX HYBRID

Soft Flex Hybrid combines the hard-shell technology with the comfort of a soft protector. The superb flexibility of Crash Absorb® memory retention foam, which adapts to the shape and movement of the body is coupled with rigid spinal plates in thermoformed shock absorbent Polystyrene for increased protection in the most critical areas.

## FLEX TECHNOLOGY BACK PROTECTOR

Flex Technology is the exclusive construction used in most of Dainese's soft spine protectors. The back panel is formed by two overlapping layers that are free to move independently, this ensures a perfect fit with the anatomy of the back. Each layer is broken down in different plates accurately replicating all back conformations in the typical riding positions.

## CRASH ABSORB

Special material (water-repellent elastic-visco nitrile rubber) with shape retention memory and excellent energy absorption that adapts perfectly to the shape of the body and ensures optimum fit.

## RECCO®

The RECCO® Rescue System is two-part technology. Ski resorts and rescue teams carry RECCO® detectors. The detector sends out a directional search signal, which is echoed by RECCO® reflectors worn by skiers, riders and other outdoors people.
