WWW.PELTONENSKI.FI

70 YEARS OF EXPERIENCE.

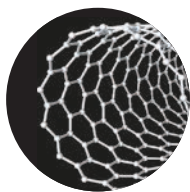

MORE ADVANCED

PELTONEN ADVANCED TECHNOLOGY

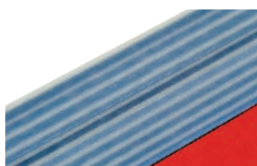

WAXFREE NANOGrip® FAST, FUN & EASY

Nanogrip® is suitable for all recreational classic skiers. Nanogrip® is a glide wax and grip wax at the same time; it is applied already in the factory. Nanogrip® is truly an all-round system having good grip and glide in most of snow conditions. It works perfectly in conditions where kick waxing is normally difficult.

Peltonen is the industry first to utilize CNT nanocarbon technology in cross-country skis.

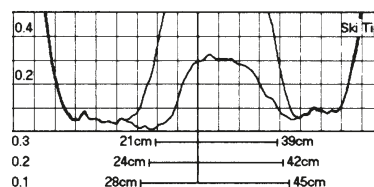

With nanocarbon epoxy, we are able to build skis that set new standards for ski strength and weight.

WSB-NANO SPECIAL BASE

Special base for wet conditions.

SKISELECTOR® PAIRING

By using customized ski measuring technology from SkiSelector, Peltonen is now offering the best-matching pairs in ski industry. Each ski is automatically measured by multiple parameters, and with the help of these parameters, pairs are then hand-picked one by one by experienced staff to get the best pairs possible.

NIS NORDIC INTEGRATED SYSTEM

Peltonen xc-ski is compatible with Rottefella NIS-system. Personalize your skis.

PELTONEN

TECHNOLOGY.

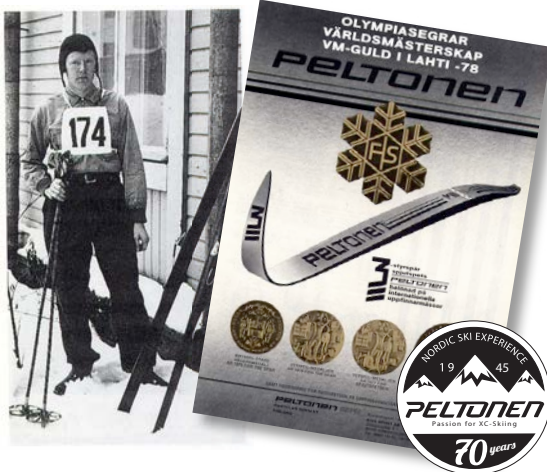

EXCEPTIONALLY WIDE EXPERIENCE OF SKIS

Started in 1945 by a talented skier and craftsman Toivo Peltonen, Peltonen has been manufacturing cross-country skis in Finland ever since.

Peltonen's history in xc-racing is as long as manufacturing history – Toivo Peltonen used to race his own skis to victory in regional championships. First Olympic medals for Peltonen were won in Sapporo 1971 by Juri Skobov and Valeri Voronkov (USSR).

Continuous manufacturing of skis during eight decades has seen many revolutions and evolutions in skis and skiing technique, and also in ski manufacturing technologies.

The driving force behind us through all these decades has always been the passion for cross-country skiing and innovation.

Year 2011 was the year of the biggest change in our history, as we started production in our new and modern factory in Heinola. We have made big investments in new manufacturing equipment and technology, and now we have three times the production capacity as in our previous factory in Hartola. Despite the moving operation, we already made our all-time manufacturing quantity record in the year 2011, with still lots of capacity left for growth.

WCR RACING COLLECTION

Peltonen Elite ski collection offers a lot of features for top athletes needs. Core construction with Nano High Speed base material increases the glide and performance of skis into a whole new level. Peltonen is producing all of the racing skis in a separate production line. You can find top featured skis that are usually available only for World Cup skiers from your local ski shop.

PELTONEN SUPRA X SKATE

This is a completely redesigned Peltonen Elite skate ski. An improved Aircell core construction combined with a reshaped tip and tail makes skiing more stable and relaxed. A stiffer front section of the ski increases gliding properties during uphill skiing. Core construction with a lower camber creates better glide in all snow conditions. This ski also comes with a Nano High Speed base material that improves glide in higher speeds. The Supra X skate is also available with the Nano High Speed Wet base material for wet conditions.

Lengths	181, 188, 193
Base	Nano High Speed, NHS Wet
Profiles	Hard track Universal track Wet snow track
Flexes	Medium, Stiff

Our elite race skis are available in different profiles for a full range of racing conditions. With various profiles we can offer you the best working ski to all special conditions. Profile differences are created by constructional (lamination) and also by base material variations.

HARD TRACK

- > Stiff and long camber to assure good skiing stability
- > Short pressure zones with pressure against snow
- > Stiff and closed tip and tail (higher torsional rigidity)

WET SNOW TRACK

- > Ski with rather low camber combined with rather short pressure zones
- > Tip and tail opening to avoid suction effect
- > Special transparent (no graphite) nano wet base to match with high Fluor waxes

UNIVERSAL TRACK

- > Lower and shorter but stiff camber when compared with Hard Track
- > Rather long pressure zones
- > Flexible and little opening tip and tail

PELTONEN INFRA X CLASSIC

Peltonen Elite classic ski for classic XC-skiing. An improved Aircell core construction with higher profile gives more space for kick wax and less drag for better glide. In addition, the higher and more elastic wax pocket gives excellent, easier kick action without sacrificing glide. This ski also comes with a new Nano High Speed base material which improves glide in higher speeds. The Infra X classic is also available with the Nano High Speed Wet base material for wet conditions.

Lengths	188, 195, 202, 207
Base	Nano High Speed, NHS Wet
Profiles	Universal / Cold Wet snow
Flexes	Medium, Stiff

Our elite race skis are available in different profiles for a full range of racing conditions. With various profiles we can offer you the best working ski to all special conditions. Profile differences are created by constructional (lamination) and also by base material variations.

UNIVERSAL / COLD SKI

- > Long and low initial cambers with reasonable end stiffness
- > Choose cold snow camber lower compared to universal

WET / KLISTER SKI

- > Long and rather high camber with rather high end stiffness
- > Tip and tail opening to avoid suction effect
- > Special transparent (no graphite) nano base to match with high Fluor waxes

PELTONEN INFRA X CLASSIC ZERO

The Infra X Zero is built specifically for difficult weather conditions close to freezing with falling snow. The ski includes an improved kick wax free grip zone that works now also work on a glazed track.

Lengths	188, 195, 202, 207
Base	NHS + Zero
Profiles	Universal
Flexes	Medium, Stiff

ZERO

PELTONEN WAXFREE ZERO

ZERO - special waxfree base for wet snow conditions. Available in Infra-X.

PELTONEN RACING COLLECTION

Peltonen Racing collection – with lots of great improvements for active skiers and citizen racers. These skis are fast and stable to ski on. All skis are equipped with an extremely light Aircell honeycomb core and top quality base materials. Flexes are available in a uniquely wide range – manufactured up to 140 kg.

Handmade in Finland

NIS
NORDIC INTEGRATED SYSTEM

PELTONEN **SUPRA C** SKATE

The Supra C skate includes several same top elements that can also be found in the WCR skis. A low profile Aircell core with an improved tip and tail gives a very comfortable and stable skiing experience. The universal profile with a racing level base material works perfectly in most snow conditions. Flexes available in uniquely wide range - also for heavy weight skiers.

Lengths	181, 188, 193
Base	PRG 4100
Profiles	Universal
Flexes	Medium, Stiff, Stiff+

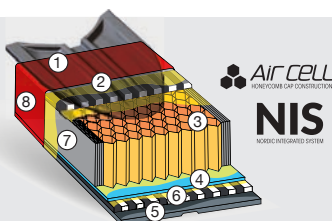

PELTONEN **INFRA C** CLASSIC

The Infra C classic comes with the same easy to ski construction as the WCR classic skis. Very elastic wax pocket, less kick power is needed to compress grip zone. There is also a lot of space for kick wax, which reduces drag and increases the gliding properties of the ski. A universal profile with a racing level base material works perfectly in most snow conditions. Wide range of flexes - available also for heavy weight skiers.

Lengths	188, 195, 202, 207
Base	PRG 4100
Profiles	Universal
Flexes	Medium, Stiff, Stiff+

- 5 Peltonen Nanobase graphite base

- 6 Fiberglass/carbon fiber laminate
- 7 Sidewall reinforcement
- 8 ControlEDGE sidewall

● HYBTONITE® nanocarbon epoxy

PELTONEN **ZENITH** SKATE

The Zenith SK is an excellent ski choice for active skating skiers. It comes with all of the racing ski features, for a reasonable price. It is the lightest ski in its price category with the feeling of a race ski. A new core construction makes it well balanced and comfortable to ski on. The low camber profile with racing base material increases gliding properties in all snow conditions.

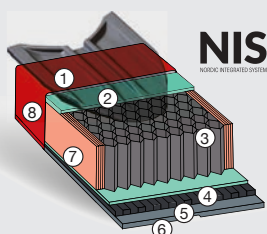

Lengths	174, 181, 188, 193
Base	PRG 4000
Profiles	Universal
Flexes	Medium, Stiff

PELTONEN **ZENITH** CLASSIC

The Zenith CL is a racing-class ski for demanding skiers, with the same lightweight and easy feeling found in the higher end skis. A high quality racing base material increases gliding properties in all snow conditions. Less kick power is needed for good grip.

Lengths	181, 188, 195, 202, 207
Base	PRG 4000
Profiles	Universal
Flexes	Medium, Stiff

- 1 New cap material
- 2 Fiberglass/carbon laminate
- 3 Aircell Aviflex core
- 4 Reinforcement laminate

- 5 Base laminate
- 6 PRG 4000 graphite base
- 7 Sidewall reinforcement
- 8 ControlEDGE sidewall

PELTONEN **FACILE** NANOGRIP®

Already a huge success, the Nanogrip® Facile has attracted a crowd of skiers with its affordable price and great waxfree performance. Just grab your skis and go! Available with or without NIS plate.

Lengths 174, 181, 188, 195, 202, 207
Base Nanogrip®
Profiles Universal

TAKING A NANOGRIP® SKI INTO USE

Select a bit softer ski than your normal classic ski.

The grip is optimal right from the start. The ski optimizes its glide permanently when you ski for the first time. This only takes a few kilometers.

While using the skis, the color alters from grey to black, which doesn't affect neither grip nor glide. With new falling snow at temperatures close to zero use always Rex Anti Ice to avoid snow getting stuck on the base.

PELTONEN NANOGRIP **JUNIOR**

NANOGRIP®

PELTONEN **TIGER JR** NANOGRIP®

Easy-going Tiger for waxfree action! A premium junior ski with attracting graphics, woodcap construction, sintered base and Nanogrip coating for fun, waxfree performance. Available also with Rottefella Start bindings pre-installed.

Lengths 100-160 cm / 10 cm
Base Nanogrip®

TAKE CARE OF YOUR NANOGRIP SKI - BETTER GLIDE FOR NANOGRIP!

New fluoro Anti-Ice for Nanogrip and other no-wax bases. Prevents icing and improves glide.
